Research Projects

- 01/16 - 12/18  **InVID – In Video Veritas** (EU H2020). *Verification of Social Media Video Content for the News Industry*. This Innovation Action started in January 2016 and builds Web-based applications to automatically identify newsworthy video content spread via social media, confirming or rejecting its credibility using state-of-the-art analytical techniques. Within InVID, webLyzard leads platform development and overall system integration, leveraging the existing video retrieval capabilities of its Web Intelligence platform.
- 03/14-02/17  **ASAP – Adaptive, Highly Scalable Analytics Platform** (EU FP7). This project builds a unified, open-source execution framework for scalable data analytics. It incorporates and advances state-of-the-art programming model features, including resource elasticity, fault tolerance and the ability to handle large sets of irregularly distributed data. Business analysts can assess cost and performance of computational resources, and render advanced visualizations to obtain accurate and intuitive results in real time.
- 01/14 - 12/16  **PHEME – Computing Veracity across Media, Languages, and Social Networks** (EU FP7). Analyzing big data repositories aggregated from short, context-dependent social media postings poses three major computational challenges: volume, velocity, and variety. This project will focus on a fourth, hitherto largely unstudied, challenge: veracity. It will model, identify, and verify phemes (Internet memes with added information on truthfulness or deception), as they spread across media, languages, and social networks.

01/16-12/16

US Election 2016 Web Monitor (www.weblyzard.com/us-election-2016-web-monitor). Like no other Presidential Election in recent history, the campaigns of Hillary Clinton and Donald Trump polarized the global dialogue and resulted in heated discussions on social media platforms. To analyze these discussions, this open data initiative processed more than 135 million Twitter postings, news media articles and publications of international organizations to reveal how citizens and stakeholders perceived the presidential race.

10/13 - 09/16

DecarboNet – Citizen Empowerment and Translating Collective Awareness into Behavioral Change (EU FP7; www.decarbonet.eu). This project will identify determinants of collective awareness, trigger behavioral change, and provide novel methods to analyze the underlying processes. Core innovations are built around a context-specific repository of carbon reduction strategies. To refine this repository, we will utilize citizen-generated content in a societal feedback loop to enable an adaptive process of social innovation.

- Austrian Sustainability Award 2016 – 2nd Prize in the category ‘Communication & Decision Support’

01/05 - dato

Media Watch on Climate Change (www.ecoresearch.net/climate): To increase awareness and the availability of environmental knowledge, the *Media Watch on Climate Change* provides a continuously updated account of online coverage on climate change and related issues. The portal aggregates, filters and visualizes environmental content from various sources including Anglo-American news media sites, blogs, Web 2.0 platforms (Facebook, Twitter, Google+, YouTube), environmental organizations, and Fortune 1000 companies.

- Austrian National Award for Multimedia and e-Business 2009: Jury Prize in the category ‘Energy, Climate and Environment’ (www.multimedia-staatspreis.at).
- Finalist of the Semantic Web Challenge 2007 (challenge.semanticweb.org).
- Winner of the Digital Earth 3D Visualization Challenge 2007, held in conjunction with the 5th International Symposium on Digital Earth (www.isde5.org).

11/12 - 10/15

uComp – Embedded Human Computation for Knowledge Extraction and Evaluation (CHIST-ERA; www.ucomp.eu). The project will merge collective human intelligence and automated knowledge extraction methods in a symbiotic fashion. It will develop a scalable human computation framework for knowledge extraction and evaluation, delegating the most challenging tasks to large user communities and continuously learning from the users’ feedback to optimize automated methods as part of an iterative process.

07/11 - 12/13

DIVINE – Dynamic Integration & Visualization of Information from Multiple Evidence Sources (FFG; www.weblyzard.com/divine). Big data analysts rely on combining multiple data sources to build comprehensive, up-to-date and properly interlinked information spaces. This requires methods to integrate these sources and track their evolution. DIVINE provides such methods with a lightweight seed ontology acting as the focal point for integrating new evidence from structured, unstructured and social sources.

03/10 - 11/12

Climate Change Collaboratory (ACRP; www.ecoresearch.net/triple-c). This project builds tools to manage expert knowledge in a collaborative manner. Innovative survey instruments in the tradition of “games with a purpose” create shared meaning through collaborative ontology building, and leverage the extensive user base of social networking platforms to capture indicators of environmental attitudes, lifestyles and behaviors.

01/03 - dato

ECOresearch Network (www.ecoresearch.net). The interdisciplinary *Research Network on Environmental Online Communication* brings together scientists of different backgrounds to explore the development and evaluation of networked information systems that advocate sustainability and the protection of natural ecosystems. The network supports the research activities of its members, and identifies synergies between projects.

10/98 - dato

webLyzard (www.weblyzard.com) builds state-of-the-art Web intelligence tools to reveal flows of relevant information between stakeholders through trend analyses, benchmarks and customized reports. The extracted knowledge supports marketing and public outreach managers, strategists and chief information officers alike in their efforts to monitor emerging trends and improve their organizations’ online communication strategies.

01/08 - 06/10

RAVEN – Relation Analysis and Visualization for Evolving Networks (FFG). RAVEN keeps analysts and decision-makers up-to-date about the unfolding of events in endogenous and exogenous information spaces, which reflect interconnected events and processes of the real world. RAVEN aims to understand the evolution of such information spaces by analyzing and visualizing temporal-semantic relations between their elements.

10/07 - 04/09

US Election 2008 Web Monitor (www.ecoresearch.net/election2008) embraces the influential role of social media in presidential elections and analyzes the online coverage by different stakeholders. The system captures the Web sites of news media, Fortune 1000 companies, environmental NGOs and political blogs. For each candidate, it extracts attention, sentiment, and associated keywords from a large repository of Web resources.

- Austrian National Award for Multimedia and e-Business 2008: First Prize in the category ‘Online Communities, Web 2.0 and Social Networks’ (www.multimedia-staatspreis.at).

01/08 - 06/10

RAVEN

RAVEN – Relation Analysis and Visualization for Evolving Networks (FFG; www.modul.ac.at/nmt/raven). RAVEN keeps analysts and decision-makers up-to-date about the unfolding of events in endogenous and exogenous information spaces, which reflect interconnected events and processes of the real world. RAVEN aims to understand the evolution of such information spaces by analyzing and visualizing temporal-semantic relations between their elements.

10/06 - 04/08

idiom

IDIOM – Information Diffusion across Interactive Online Media (FFG; www.idiom.at). Linguists define “idiom” as expression whose meaning differs from the literal meanings of its component words. Similarly, the study of information diffusion promises insights that cannot be inferred from individual network elements. Media monitoring projects often focus on a particular medium or neglect important aspects of the human language. IDIOM addresses these gaps to reveal fundamental mechanisms of information diffusion across media with distinct interactive characteristics (Web Sites, RSS feeds, blogs etc.).

01/06 - 12/07

AVALON – Acquisition & Validation of Ontologies (FFG; www.webyzard.com/avalon): Valuable knowledge that surrounds the workflows of business entities can be extracted automatically and represented as ontological structure. The methodology is built upon a cybernetic control system to automatically align extracted knowledge with business processes, external indicators and individual expertise. The project’s adaptive services are particularly useful in volatile business environments, which require dynamic reconfiguration of business processes and a flexible allocation of resources.

07/04 - 12/04

US Election 2004 Web Monitor (www.ecoresearch.net/election2004). How do international media, the Fortune 1000 and environmental organizations tailor electronic content to fit their political agenda? To answer this question, the *US Election 2004 Web Monitor* processed more than 500,000 documents in weekly intervals – about 125 million words in 11 million sentences. Estimates of attention and attitude towards presidential candidates complemented keywords summarizing the main issues associated with each candidate.

10/02 - 03/04

ECOINVEST

EcoInvest: Conceptual development of an independent investment portal for socially and ecologically responsible investments; in a joint effort with the *Austrian Society for Environment and Technology* and the *Austrian Federal Ministry of Agriculture, Forestry, Environment and Water Management*, the project also evaluated and compared the applicability of open-source content management systems.
